

Drop the F Bomb Transcripts

Jodie – Long form

Jodie: I'm about to "drop the F*Bomb" with my kid, let's see how this goes.

I want to talk to you about something that's been on my mind.

Son: What is it?

Jodie: Have you heard of fentanyl?

Son: I've heard of it, but I don't really know much about it.

Jodie: Ok, let's get into it, it's important.

So, fentanyl is a synthetic opioid commonly made illegally. Fentanyl can be mixed into other drugs or used to make fake prescription pills.

Son: That's crazy.

Jodie: Let me put this into perspective, right?

So, two milligrams of fentanyl which is about a few grains of sand and that can be lethal.

Son: That's so little. That's nothing.

Jodie: Yeah, fentanyl is 50x more potent than heroin and 100x more potent than morphine.

Son: I don't ever want to put myself in a situation where I have no idea if I'm in danger or not.

Jodie: I just dropped the F Bomb with my kid, now it's your turn.

Lucina – Long Form

Lucina: Alright guys, so I'm about to "drop the F*bomb" with my kid, let's see how it goes.

Hey, what's up, Cam?

Cam: Hey, mom.

Lucina: Alright so I wanted to have a conversation with you about a drug I learned about called fentanyl. Have you ever heard about fentanyl?

Cam: No, I haven't.

Lucina: Ok so fentanyl is an extremely powerful drug that is going around, and a lot of teens are overdosing from it.

Fentanyl is hidden in drugs and so many teens don't even know they're taking it. Did you know people sell pills that look like study drugs, anxiety meds, party drugs, but they're actually fake?

Cam: Wow.

Lucina: It's hard to detect fentanyl you can't just look at a pill and say "Oh, this is laced with fentanyl" because you can't see it, you can't smell it, you can't even taste it.

Cam: That's crazy.

Lucina: It is. So, you know I have to have this conversation with you because I'm just learning about fentanyl myself. Even if a friend you trust, or a friend of a friend gives you a pill you shouldn't take anything that isn't prescribed to you by a doctor.

If you want to talk about how you're feeling about stress or anxiety, I'm here for you.

Cam: Thanks, mom.

Lucina: I just dropped the F bomb with my kid, now it's your turn.

Rob – Long Form

Rob: I'm about to go "drop the F*bomb" with my kid, let's see how it goes.

Hey, you got a second to talk?

Daughter: Yeah, what's up?

Rob: So, what do you know about fentanyl?

Daughter: I know a little but not a lot.

Rob: It seems to be everywhere, so I did some research, and I read that in 2020 alone that ¾ of drug overdose deaths from people ages 14 – 23 came from a synthetic opioid like fentanyl.

Daughter: That's really scary.

Rob: Fentanyl is cheap to make, and it's being mixed in with other street drugs and fake prescription pills so that drug dealers can stretch their supply and make more money

Daughter: That's crazy.

Rob: Fentanyl is hidden in drugs so many teens don't even know they're taking it.

Many teens are seeking prescription pills to help them study, ease anxiety, or just to experiment, and some of them are getting fakes without knowing it that are laced with fentanyl and are losing their lives because of it.

And so, like if there's anything where you're feeling stressed or even anxious, I'm here to talk.

Daughter: Thanks dad, I appreciate it.

I just dropped the F bomb with my kid, not it's your turn.
